What is **Secure It?**

Secure It is a smart residential safety platform that lets homeowners control and monitor their living space, contact emergency services instantly, and helps responders act fast through real-time alerts and location tracking.

Secure It

- Problem & Solutions

Homeowners lack a unified platform  to control smart devices, stay alert to local threats, and access emergency help. Meanwhile, emergency responders struggle with delays and poor navigation, limiting their ability to respond effectively.

Centralized smart control

Easily manage all connected security devices from one unified platform.

Live Monitoring & Quick Action

Access real-time camera feeds, arm/disarm systems, and take instant action when needed.

Instant Emergency Assistance

Reach out to police, medical, or fire services directly from the app in critical moments.

Community-Driven Safety Alerts

Stay updated on nearby incidents and connect with your neighborhood for shared vigilance.

Task Management with Priority Indicators

Get assigned incidents sorted by urgency, with location and status tracking.

Integrated Navigation & Live Feed Access

View live video from homeowners to assess the situation before arriving.

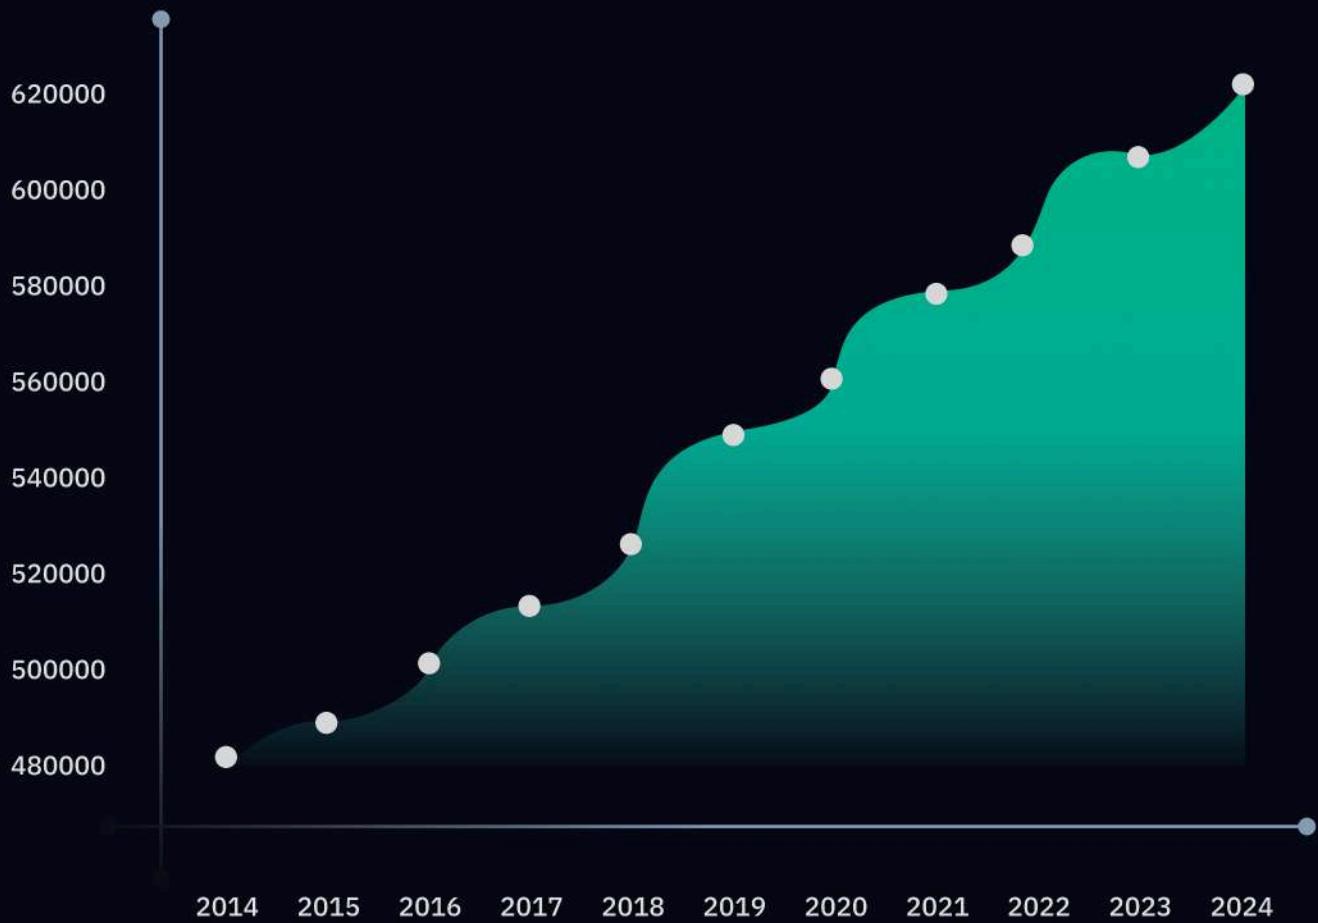

With **Secure It** you can,

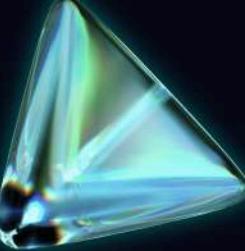

- Arm the system and monitor live feeds
- Individually control security devices
- Contact emergency responders instantly
- Respond to incident alerts in real-time
- Connect with your local safety community

- Statistics on burglary and residential break-ins

In 2024, India recorded 445.9 crimes per 100,000 people, with theft as the most common offense. In Tamil Nadu, residential burglary cases dropped by 10.7% - from 17,788 in 2023 to 15,892 in 2024 - highlighting the growing impact of tech-based policing. Still, break-ins remain a critical threat in urban homes.

Burglary and Theft- related IPC cases in India from 2014 to 2024

Target Audience

Homeowners with Families

Individuals who manage or reside in homes and are responsible for household security.

Emergency Responders

Public responders who assist during critical events and emergencies.

Market Research

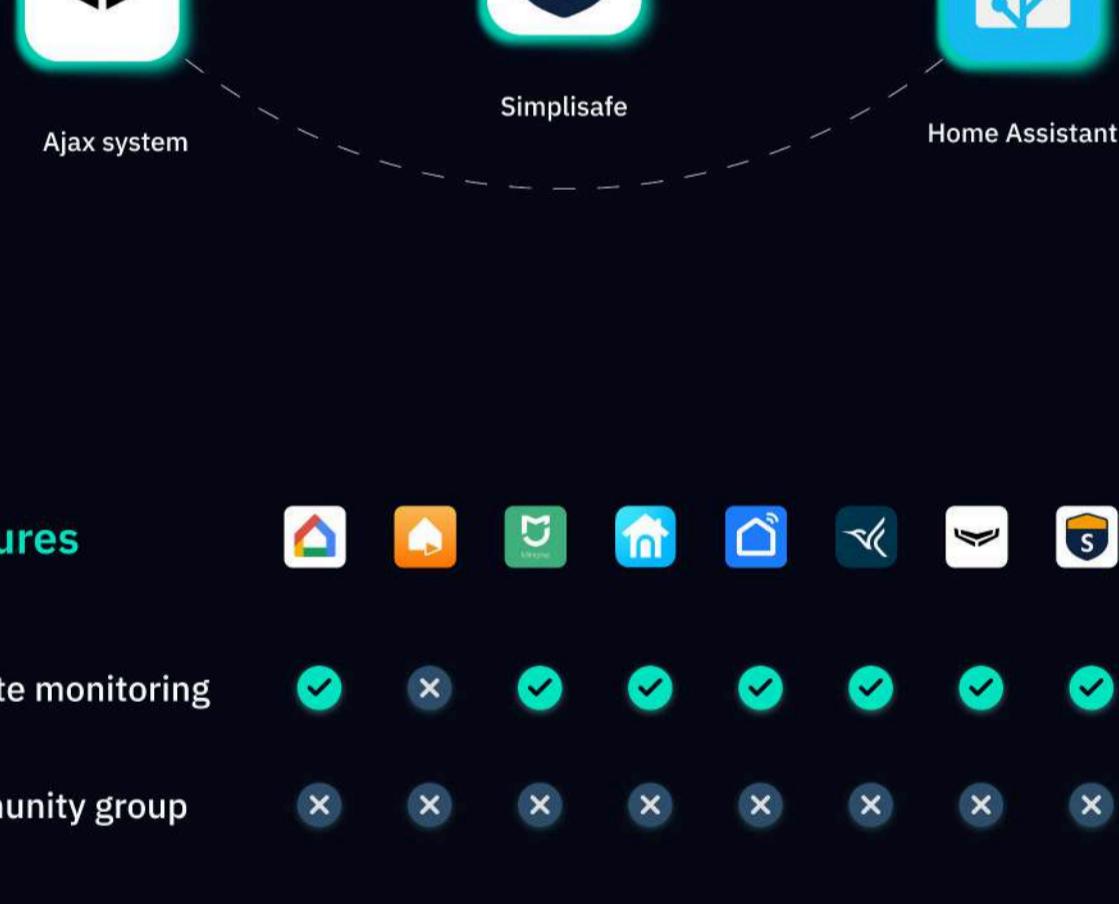

Breaking down the security market into total size, reachable users, and attainable share.

With a ₹6.64 lakh crore global market and a ₹1,470 crore opportunity in India, Secure It taps into a fast-growing home security sector with localized potential.

- TAM (Global): ₹6.64 Lakh Crore – Total global demand for home security.
- SAM (India): ₹9,794 Crore – 15% of 105M Indian households projected to adopt.
- SOM (Target): ₹1,469 Crore – 1.5% realistic capture based on positioning and strategy.

Competitive Analysis

A representation of homeowners and emergency responders, capturing their needs, motivations, and challenges to guide meaningful and secure design solutions.

Quantitative Research

Gathered insights from 50+ respondents via Google Forms to understand home security habits, user pain points, awareness, and user expectations.

1) What type of home do you live in?

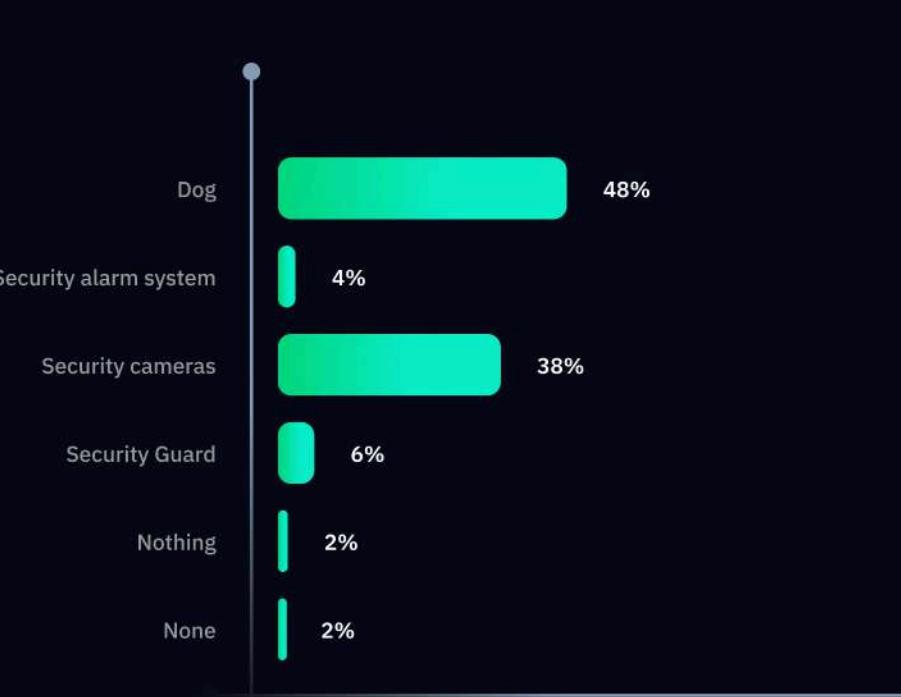

2) How safe do you feel in your home?

3) Do you feel that your neighborhood is safe?

4) How important is home security to you?

5) On a scale of 1-5, how satisfied are you with your current home security?

6) Have you ever experienced a break-in or attempted break-in at your current residence?

7) Do you have a security alarm system installed in your home?

8) What type of security measures do you currently have in your home?

9) Select your top three fears regarding home security?

10) Do you have a fire extinguisher readily available in your home?

Qualitative Research

Conducted 5 user interviews with homeowners and emergency personnel to identify critical needs and usage patterns.

Home Owner

Do you currently use or are you interested in smart home security solutions?

How important is home security to you, and why?

What are your top three concerns when it comes to home security?

How safe do you feel in your current neighborhood and home environment?

What runs through your mind about home security when you're away from home?

Have you ever experienced or come close to a break-in at your current residence?

What security measures do you currently use at home?

How satisfied are you with your current home security setup?

What are your thoughts on involving external protection like a dog or a security guard?

What features would you expect or appreciate in a home security app?

Emergency Responders

Roughly what percentage of emergency calls are genuine?

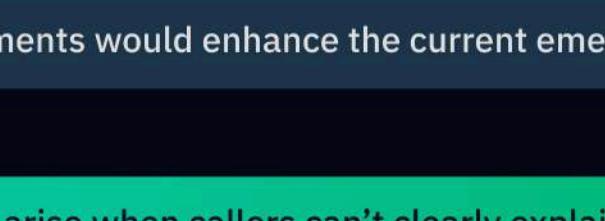

What factors most influence successful emergency responses?

How frequently do you respond to theft or burglary-related emergencies?

How critical is accurate location info during emergency calls?

What's your opinion on today's home security and emergency apps?

How do you manage false alarm cases?

What protocols do you follow in high-risk situations?

How do you prioritize when multiple emergencies occur at once?

What improvements would enhance the current emergency call system?

What challenges arise when callers can't clearly explain the situation?

About

Aadhana is a bold and confident housewife who takes home security seriously. She's proactive in ensuring her family's safety and stays informed about the latest security practices. With a tech-savvy mindset, Aadhana explores smart home solutions and actively participates in her community's safety initiatives.

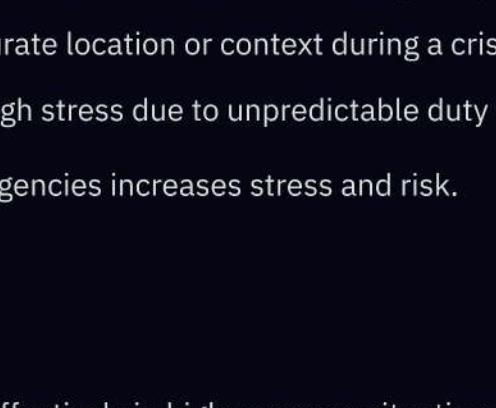

Painpoints

- Aadhana worries about the safety of her children and elders when she's not around.
- Anxiety when leaving the house unattended, especially during travel or late hours.
- Stress from hearing frequent news about thefts or accidents in nearby areas.
- Difficulty finding reliable security solutions.

Needs & Goals

- Aadhana seeks a reliable system to secure key entry points in her home.
- She aims to create a secure, nurturing environment where her family feels truly safe.
- To set up a future-ready home with advanced smart technology that enhances both safety and comfort.
- She seeks a community to share and learn home security practices.

About

Mithun, Esther, Kannan are committed emergency responders working on the front lines to safeguard lives and manage critical situations. Whether maintaining public safety, treating patients, or responding to fires, they thrive under pressure and values efficiency, teamwork, and clear decision-making.

Painpoints

- Juggling multiple sources of communication and delayed updates.
- Difficulty accessing accurate location or context during a crisis.
- Emotional fatigue and high stress due to unpredictable duty hours.
- Delayed backup in emergencies increases stress and risk.

Needs & Goals

- To respond swiftly and effectively in high-pressure situations.
- To ensure the safety of individuals, teams, and the broader community.
- Stay mentally resilient and physically prepared for unpredictable challenges.
- To communicate clearly and coordinate seamlessly with other responders.
- To receive timely support, recognition, and understanding from peers and leadership.

Empathy Mapping

Mapping the behaviors, thoughts, emotions, and expressions of homeowners and emergency responders to design solutions that align with their real-world experiences and priorities.

Home Owner

Says

I need an advanced security system for safety.

People should take home safety more seriously.

I just want to feel safe in my own house.

The system has to be reliable.

Thinks

It's time to upgrade our security for better protection.

I hope my family knows what to do if something happens.

What if there's an emergency when I'm not around?

Maybe our neighbors will notice if something's off.

Feels

I get anxious thinking about break-ins or harm to my family.

I feel calm when everything at home is secure.

I worry someone might steal valuables or documents.

I'm scared of fire risks inside home.

Does

I get anxious thinking about break-ins or harm to my family.

I feel calm when everything at home is secure.

I worry someone might steal valuables or documents.

I'm scared of fire risks or gas leaks.

Emergency Responders

Says

Teamwork is essential to handle emergencies effectively.

Public safety and patient care come first.

We face unpredictable situations every single day.

We need better tools and support to do our job right.

Thinks

How can we better manage the stress that comes with this job?

Are we doing enough to protect ourselves and our teams?

How can we build stronger trust with the community?

What more can we do to prevent future emergencies?

Feels

I feel proud to protect and serve the community.

I get stressed handling dangerous, high-pressure situations.

I feel concerned for victims' safety and my team's well-being.

I'm fulfilled when I see lives saved or people helped.

Does

I respond to calls, patrol areas, and handle critical incidents.

I provide first aid, treat patients, and monitor their recovery.

I engage in outreach to educate people on safety and prevention.

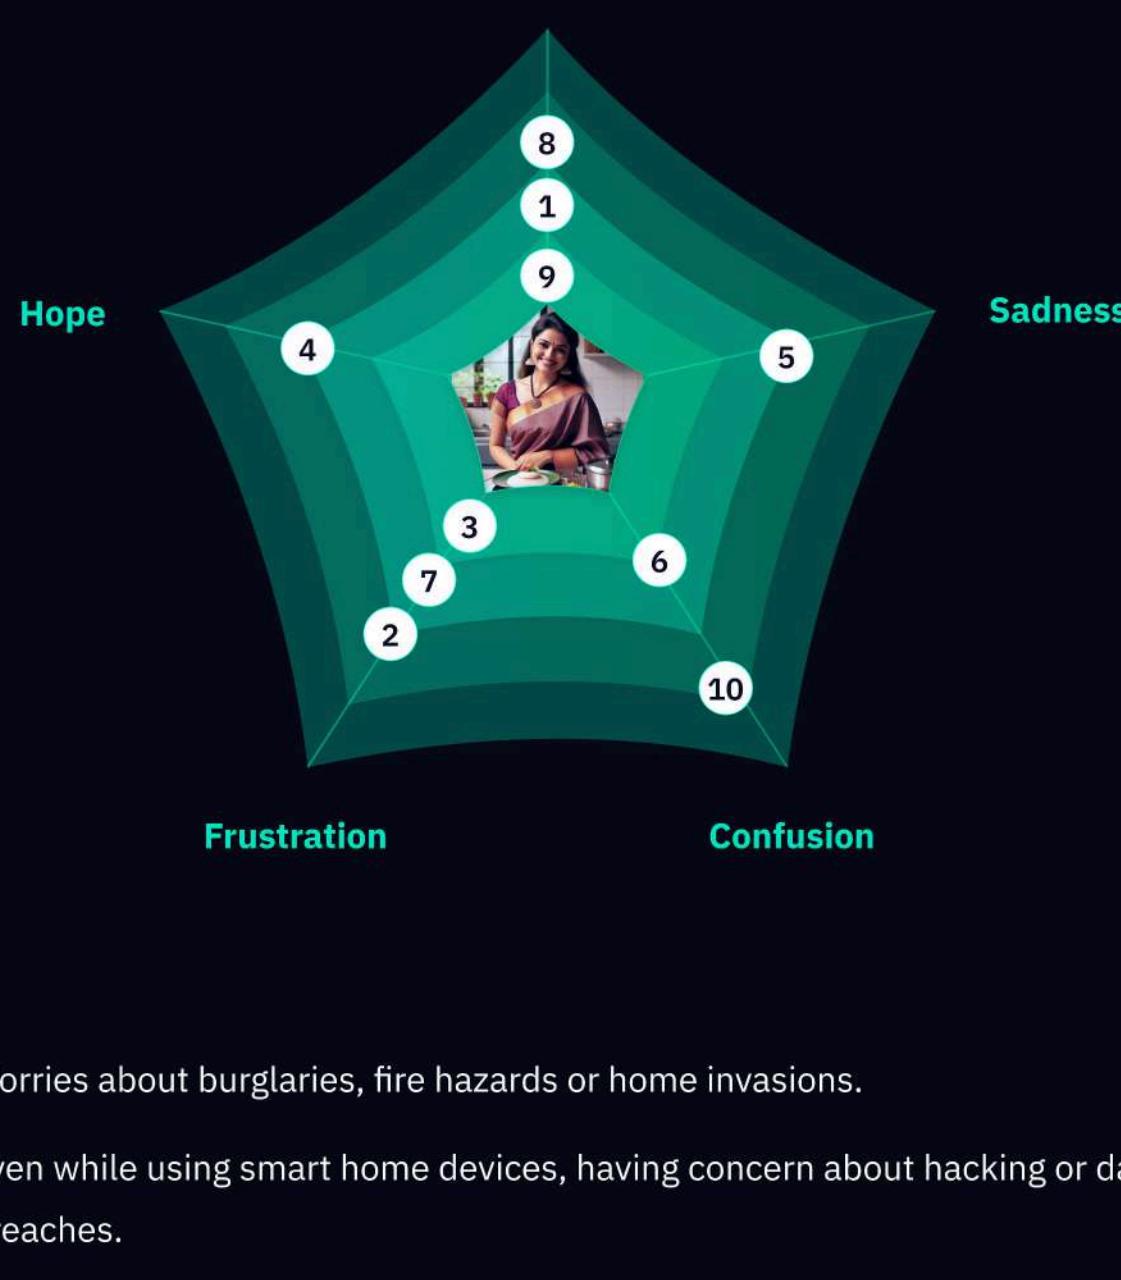

I train regularly and coordinate with other services during crises.

EMO Web

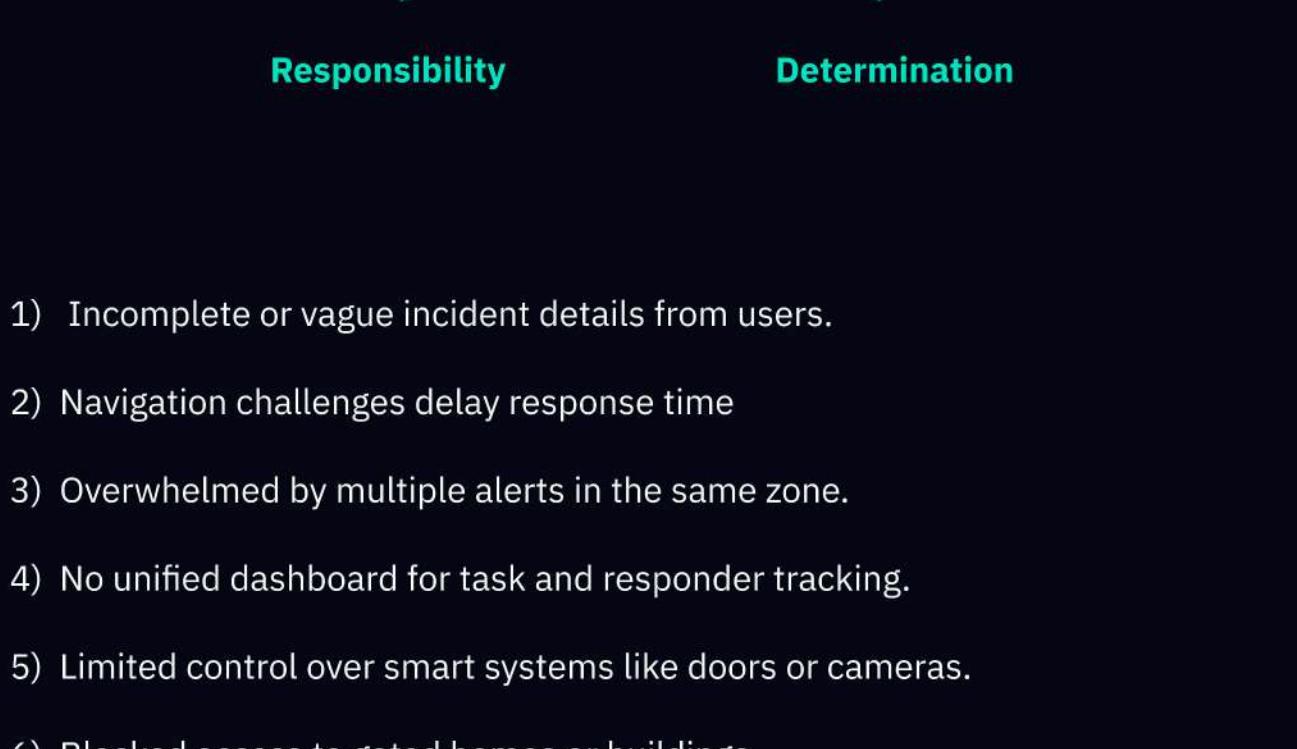

Identifying key user problems and aligning them with five core emotions to uncover emotional friction points and design more empathetic security solutions.

- 1) Worries about burglaries, fire hazards or home invasions.
- 2) Even while using smart home devices, having concern about hacking or data breaches.
- 3) Facing difficulties in finding reliable security solutions.
- 4) Having motivation to create a secure environment for their family.
- 5) I feel alone when no help comes quickly during an emergency.
- 6) Leaving doors or windows unlocked due to urgency.
- 7) Left, misplaced or losing home keys.
- 8) Does not know what is happening at home on absence.
- 9) Fear about gas leakage and harm due to home appliances.
- 10) Double thoughts on using the technology due to less awareness.

Emergency Responders

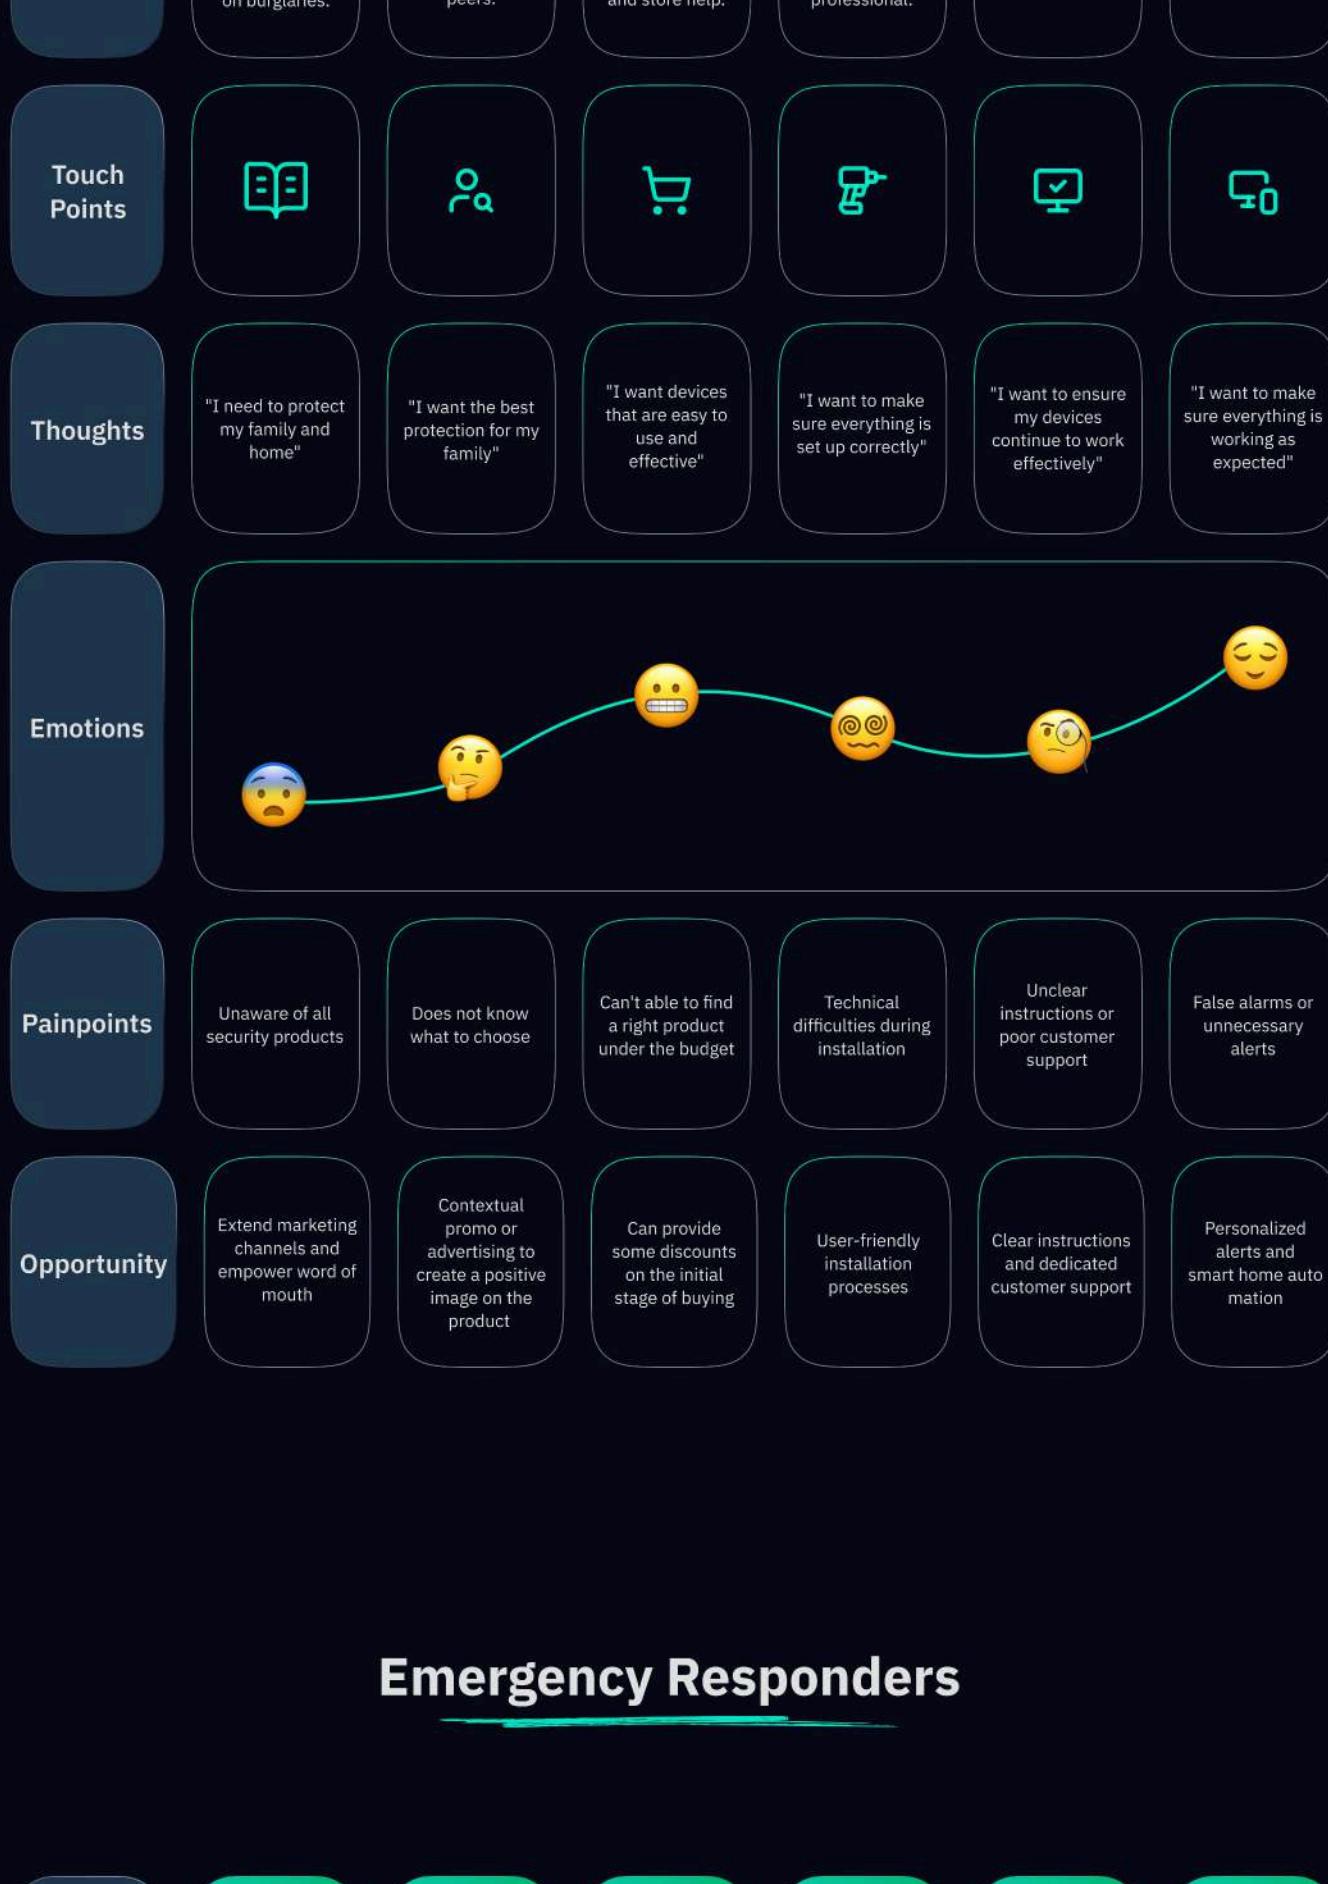

- 1) Incomplete or vague incident details from users.
- 2) Navigation challenges delay response time
- 3) Overwhelmed by multiple alerts in the same zone.
- 4) No unified dashboard for task and responder tracking.
- 5) Limited control over smart systems like doors or cameras.
- 6) Blocked access to gated homes or buildings.
- 7) Fear of losing community trust due to delays.
- 8) No real-time updates after dispatch.
- 9) Uncertainty about the threat level before entry.
- 10) Lack of recognition despite risking their lives.

Dashboard Design

A Unified Interface to Monitor, Control, and Respond All From One Secure Place

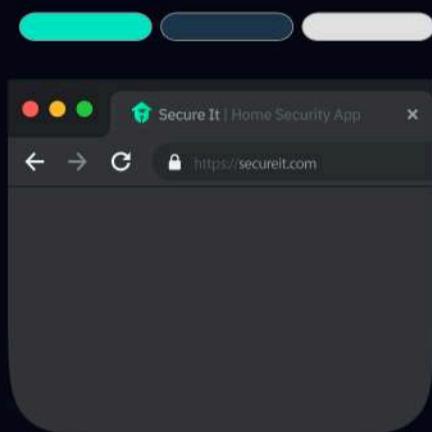

The wireframe illustrates a dark-themed dashboard layout. It features a header with a logo, navigation icons, and a user profile. Below the header are several functional sections: 'Alerts' (listing recent events), 'Device Control' (with buttons for lights, fans, and locks), 'Emergency' (with icons for police, medical, fire, and emergency contacts), 'Navigation' (a map with location markers), and 'Activity Log' (a history of system events). The overall design is clean and organized, providing a comprehensive overview of home security status.

The final UI mockup shows the dashboard in a dark-themed environment. The top bar includes a 'Welcome Home, Shanthi!' message, an account icon, and 'Arm Home' and 'Disarm Home' buttons. On the left, there's a vertical sidebar with icons for Home, Security, Notifications, and Help. The main area contains live video feeds from 'Cam 1' and 'Cam 2', each with a 'Live' indicator. Below the cameras are sections for 'Alerts' (listing motion, system, and device alerts with timestamps), 'Device Control' (with toggle switches for lights, fan, and lock), 'Emergency' (with icons for police, medical, fire, and emergency contacts), 'Activity Log' (listing system events like arming and motion detection), 'Device Health Check' (showing battery levels for Sensor 3 and Cam 2), and 'Track Navigation' (a map showing a route from Choolaimedu to Nungambakkam SDAT Stadium). The overall design is modern and functional, providing a clear and accessible way to manage home security.

Usability Testing

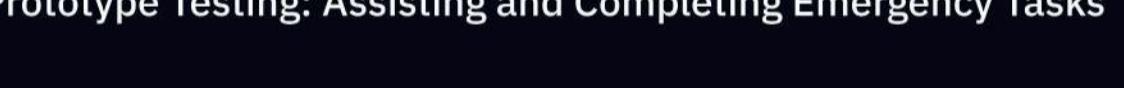

Tested with 6 Target Users to Identify Pain Points and Improve User Experience

Responses	# of blocks
05	3

#1 Prototype Testing: Accessing Home Alerts & Managing Devices

#2 Prototype Testing: Requesting Emergency Assistance

#3 Prototype Testing: Assisting and Completing Emergency Tasks

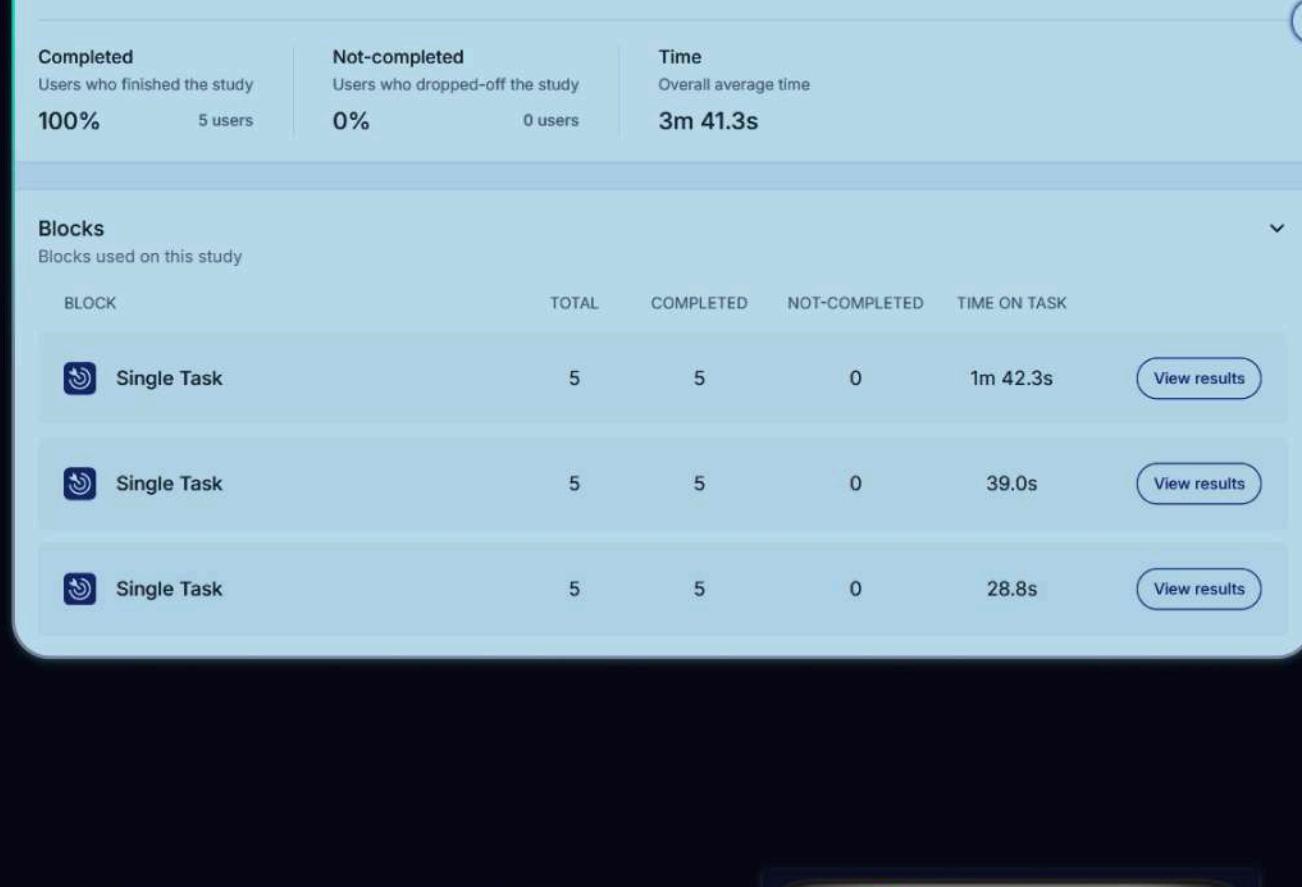

Improved clarity by 30% after user feedback

Improvements made post usability testing

- Resolved a bug that caused disconnection during the homeowner logout process, ensuring a smoother user exit.
- Added success messages and visual cues for adding/removing devices to reduce user confusion.
- Added a dedicated modal for homeowners to instantly share live footage with Police, Medical, or Fire personnel.
- Created separate identity verify ID screens for both homeowners and emergency responders to ensure role-based security and trust.

Heatmaps

Identifying key user problems and aligning them with five core emotions to uncover emotional friction points and design more empathetic security solutions.

Future Roadmap & Innovations

What this Project taught me

Secure It taught me how to translate complex safety needs into intuitive digital experiences. I learned to balance empathy, accessibility, and visual clarity while solving real user problems. This project deepened my confidence in leading end-to-end design thinking with purpose and impact.

Thanks for ***Joining the Mission*** to secure lives!

Grateful for your time and interest in **Secure It**. If this project sparked your interest,
I'd truly value your **thoughts, encouragement**, or a **Quick follow**
